

We Can Take Anything You Dish Out.

Our thermoset composites function at temperatures of 180°C and higher – under the most extreme conditions. Not only that, they're tough!

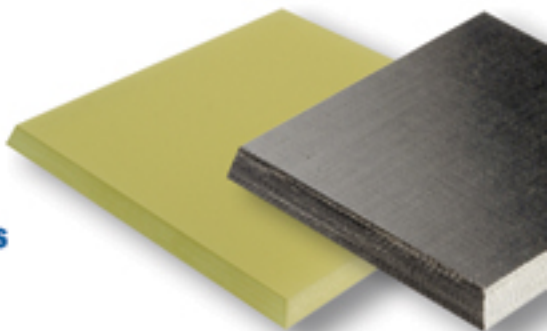

- **Blocking Material** provides excellent insulation, while stabilizing the copper coils.
- **Ripple Springs** hold coils and insulation in place.
- **Rotor and Stator Wedges** withstand the stress of installation and operation.
- **Pre-Pregs** provide excellent insulation properties and creep resistance.

Put the strength of Norplex-Micarta behind you.

For more information on our high-temperature, high-impact products, contact us today at info@norplex-micarta.com, or +1 800-848-4431.
